Cables used for robots 电缆, 用于机器人

We offer you customised special cables with minimum order quantities, **starting at 100m** – including short delivery times.

Standard cables, we often deliver from stock.

我们为您提供定制的特种电缆, 最小订单量为100米, 交期短。
基于标准电缆, 我们通常交付现货。

Cables used for robots have to meet the greatest requirements in terms of mechanical, chemical and thermal properties. They need to withstand rapid acceleration and deceleration, tensile, compressive and torsion stress as well as the millions of bending cycles. They also need to be resistant to high temperatures, welding spatters, oil and various other chemicals.

We use standard and special insulation material which makes our cables highly abrasion and media resistant, always keeping their high flexibility. Moreover, we offer an extensive range of cables for fixed applications.

Taking into account our long years of expert knowledge in the design, production, installation and service offers of robotic cables we truly are cable experts. In order to meet these rigorous requirements we use our own in-house testing facilities to test our cables for performance capacity and resilience.

You can rely on us.

We can also assemble special cables for you in the field of robotics, e.g. cable harnesses for drag chains or ground cable harnesses.

It goes without saying that we provide our customers with individual consultation and make prototypes.

机器人专用电缆必须满足机械、化学和热性能方面的最高要求。它们必须经受住快速的加速和减速、拉伸、压缩和扭转应力, 以及数百万次的周期性弯曲。它们同样必须耐高温、焊接飞溅、油类及其他化学品。

我们采用标准和特殊的绝缘材料, 使我们的电缆具有较高的耐磨性和介质抗性, 并始终保持高灵活性。此外, 我们为固定设备和应用提供多种电缆。

鉴于我们在机器人电缆设计、生产、安装、服务等方面拥有多年的专业技术, 我们是名副其实的电缆专家。为了满足这些严苛的要求, 我们试用自己内部的测试设备来检测电缆的性能和弹性——我们值得您的信赖。

您可以信任我们。

在机器人领域, 我们还能为您装配特种电缆, 如拖链用线束、地面线束。

毫无疑问, 我们可为客户提供个性化的咨询服务并制作原型。

Test center

Ensuring long-lasting dynamic requirements

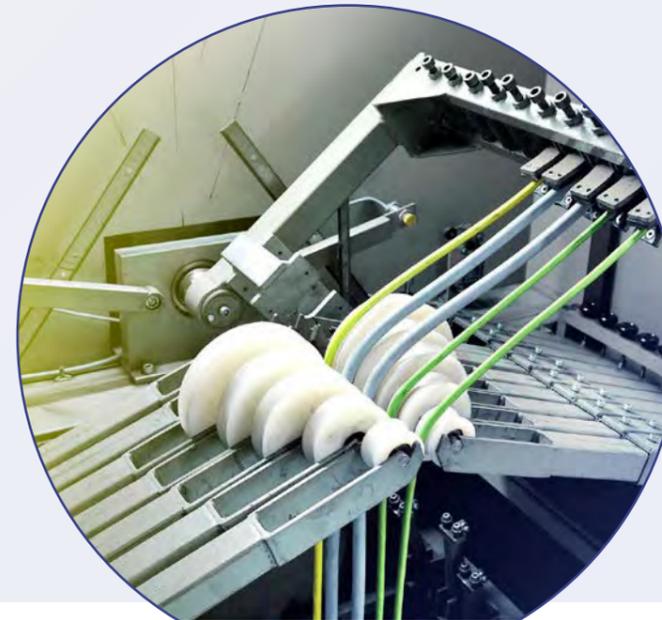

We are always investing in our device equipment to satisfy the needs of our customers. The long-lasting mobility of our cables is tested in various processes in order to prove their long service life.

我们不断进行设备器材的投入，以便满足客户的需求。为证实我们的电缆和电缆系统持久可移动的性能具备较长使用寿命，它们需经过各种程序测试。

测试中心

确保持久的动态需求

Drag chain tests

拖链测试

Our test routes have different travel ranges, accelerations and travel speeds. Each test system can test up to 40 cables over the equivalent of several years. The longest traverse path measures 50 m.

行程、速度和加速度有几种不同的设置，一次可同时测试多达 40 根电缆，被测试电缆可以是近几年生产的同等规格、同等质量的电缆，最大行程可达 50 米。

Torsion tests

扭转测试

In different torsion and torsional bending machines, the cables are tested for twisting and traction around themselves. They are subjected to a torsional movement of up to $\pm 360^\circ$ in length from 0.3 to 1 meter.

使用各种扭力测试仪、扭转/弯曲试验机对电缆进行扭转和牵引力测试；试验时，电缆绕自身轴向一个方向扭转 $\pm 360^\circ$ ，电缆长度为 0.3 - 1 米。

Bending tests

弯曲测试

In test systems with rolls for different bending radii, a test is performed to see whether the cable withstands frequent bending cycles. The rolls used have a diameter of 20 to 250 mm.

我们的产品经过数次在不同弯曲半径下的循环弯曲测试，测试设备的支辊直径为 20-250 mm。

S-shaped bending test

S形状摇摆测试

The cable is fed across two bobbins in an s-shaped flex movement. As an option and as required, weights can be fitted to both ends. The line generates up to 12 cycles per minute.

To pass the flex test, the cable may not present any power failure between the cores.

电缆样品穿过S形状的线架，来做摇摆测试，每分钟12次。如果有需要，在电缆两端还可以加上负载。

BizLink checks the quality of the cables in the in-house test centre. Discover the competence here.

Spool calculation with constants 利用常量的电缆盘计算

250	3.946
355	10.124
400	19.190
500	30.179

The capacity (effective wrapping length) of the spools depends on the cable size (diameter). By means of the given constants, the effective wrapping length can be calculated.

电缆盘的容量 (有效包装长度) 取决于电缆尺寸 (直径)。通过给定的常量就能计算出有效的包装长度。

Calculation formula / 计算公式:

$$\frac{\text{Effective wrapping length (in mm)}}{\text{常量有效的包装长度 (mm)}} = \frac{\text{Calculation constant / 计算常量}}{\text{Cable diameter squared / 电缆直径的平方}} = \frac{K}{d^2}$$

Example: 示例:
Spool = 500 mm 电缆盘 = 500 mm
Cable Ø = 12.8 mm 电缆直径 = 12.8 mm

$$\frac{\text{Effective wrapping length (in mm)}}{\text{常量有效的包装长度 (mm)}} = \frac{30179}{(12.8 \text{ mm})^2} = \frac{30179}{163.84} = 184.2$$

Calculation of continuous duty current for secondary cables 二次电缆连续工作电流的计算

A welding process cycle consists of multiple welds with different welding parameters (variable currents and variable time periods of the welding cycle).

一个焊接工艺周期由多个具有不同焊接参数 (焊接周期的变量电流和变量时期) 的焊接组成。

In this example we explain our method to calculate the Continuous Duty Current.

我们在下述例子中解释我们计算连续工作电流的方法。

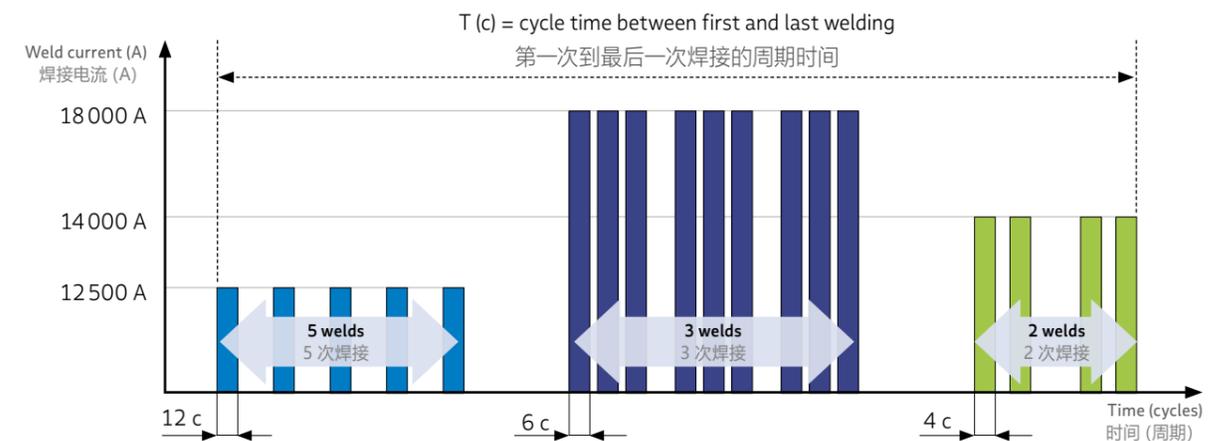

为了选择正确的二次电缆尺寸, 这是强制性的。

[若有任何问题, 请联系我们。](#)

This value is mandatory in order to choose the correct dimensions of secondary cables.

[If you have further questions, please contact us.](#)

$I_p = I_s \times \sqrt{\frac{N}{60 \times f}}$	I_p [A] = Permanent Duty Current = 恒定工作电流
	I_s [A] = Weighted average of secondary welding current = 二次焊接电流的加权平均数
	f [Hz] = Current frequency = 电流频率
	N [cycles/min] = Cycles of weld current or "On Time" per minute = 焊接电流的周期或每分钟“按时”

$$I_s = \frac{(5 \text{ welds} \times 12 \text{ c} \times 1 \text{ puls} \times 12500 \text{ A}) + (3 \text{ welds} \times 6 \text{ c} \times 3 \text{ puls} \times 18000 \text{ A}) + (2 \text{ welds} \times 4 \text{ c} \times 1 \text{ puls} \times 14000 \text{ A})}{(5 \text{ 焊接} \times 12 \text{ c} \times 1 \text{ 脉冲}) + (3 \text{ 焊接} \times 6 \text{ c} \times 3 \text{ 脉冲}) + (2 \text{ 焊接} \times 4 \text{ c} \times 1 \text{ 脉冲})}$$

$$N = \left[\frac{(5 \text{ welds} \times 12 \text{ c} \times 1 \text{ puls}) + (3 \text{ welds} \times 6 \text{ c} \times 3 \text{ puls}) + (2 \text{ welds} \times 4 \text{ c} \times 1 \text{ puls})}{T} \right] \times 60$$

$$I_p = I_s \times \sqrt{\frac{N}{60 \times f}}$$

Safety information 安全信息

Our products are manufactured according to factory standards / international standards.

我们的产品根据工厂标准/国际标准制造。

BizLink ensures safety by means of adherence to statutory requirements, standards and safety guidelines. The relevant DIN VDE specifications apply. Installation and processing may only be carried out by qualified electricians.

Tensile stress

Do not exceed the figures below for tensile stress per conductor. This applies up to a maximum of 1,000 Newton for tensile stress applied to all conductors.

- › 50 Newton/mm² for the permanent installation of cables
- › 15 Newton/mm² static tensile stress for flexible cables

Bending stress

In order to avoid damage to the cables, never go below the stipulated minimum bending radius. Avoid damaging the conductors when removing insulation, otherwise bending response is drastically impaired. The specified bending radiuses apply to ambient temperatures in the range of 20°C ± 10 °C*.

Transportation and storage

Cables are to be stored in a dry, indoor place and protected from exposure to direct sunlight. If stored outdoors, the cable ends must be closed so as to avoid penetration of humidity (especially in the case of shielded cables!). The ambient temperature for transportation and storage should be in the range of -25 °C to +55 °C. Mechanical stress should be avoided at low temperatures in particular. The guideline maximum storage period prior to use without prior testing is approx. 2 years in the case of indoor storage.

Thermal influences

Cables should be selected, laid and installed in such a way that the anticipated resistance loss is prevented and there is no risk of adjacent material being set on fire.

贸联通过遵守法定要求、标准和安全准则来确保安全性, 适用于相关的 DIN VDE 规范。

拉伸应力

每根导线的拉伸应力不能超过如下所述。对于施加到所有导体上的拉伸应力, 最多为 1,000 N。

- › 对于固定安装电缆, 应力为 50 N/mm²
- › 对于柔性电缆, 静态拉伸应力为 15 N/mm²

弯曲应力

为避免损坏电缆, 切勿小于规定的最小弯曲半径。在剥除绝缘层时避免损坏导体, 否则会严重损害弯曲响应。规定的弯曲半径适用于 20°C ± 10 °C * 范围内的环境温度。*

运输与储存

电缆应存放在干燥的室内, 并避免阳光直射。如果存放在室外, 必须封闭电缆末端, 以避免湿气侵入 (特别是在使用屏蔽电缆的情况下!)。运输和储存环境温度应在 -25°C 至 +55°C 的范围内。在低温下应特别避免机械应力。在没有事先测试的情况下使用, 如果存放在室内, 建议的最长存放周期大约为 2 年。

热影响

在选择、铺设和安装电缆时, 应避免可能造成耐受性损失的情况, 并避免相邻材料被引燃的风险。

Colour code acc. to DIN 47100

根据 DIN 47100 而定的色码

Colour code acc. to DIN 47100 with colour repetition from core no. 45 and above.

The insulation of the conductor gives the first basic colour. The codes of the multi-coloured identification are combined with a basic colour and colour rings. The second and third colour is printed on the basic colour as a form of ring. The ring width is 2 – 3 mm. A less unsharpness on the edge of the identification colour and a minor pledging of both half-rings are permitted. The cores are to be counted continuously through all layers at the same direction, beginning with the outer layer towards inside.

Electronic control and computer cable
 > single cores stranding.

根据 DIN 47100 而定的色码, 从第 45 号芯线及以上无颜色重复。

颜色环形涂在基本色上。环形宽度为2-3mm。允许识别色边缘存在少量模糊以及两个半环的低级保证。芯线应在同一方向通过所有层连续计数, 由外层开始到内层。

电子控制与计算机电缆:

> 单芯线绞合

导体绝缘提供第一种基本色。彩色识别码与基本色和色环结合。第二和第三种

Conductor materials – copper and copper alloys

导体材料 – 铜和铜合金

Most of our conductor material is copper (Cu). For the production of our wires we mainly use Cu-ETP1 (oxygenic copper) and Cu-OF 1 oxygen-free copper for special applications (e.g. hydrogen resistance). In addition to pure copper we also process a variety of copper alloys for special applications.
