## Automatic absolute calculation 自动绝对计算系统

**of robotic tools and fixtures / 适用于机器人工具和夹具**

To avoid time-consuming program modifications during plant extension or new tool setup work, we offer absolute initial calibration as part of an automated process.

为避免在工厂扩建或新工具安装工作期间修改程序耗时耗力，我们提供绝对初始校准服务，作为自动化过程的一部分。

This keeps follow-up teach-ins to a minimum. The process involves the tool being moved to the centre of the photo-electric barrier, so as to generate the tool data. Only the tolerance zone (in which the tool is permitted to move) and the starting point of the calibration need to be taught-in to the system. Once complete, the robot moves the tool within the defined tolerance zone and calibrates itself automatically with the aid of the supplied program.

这样就可以将后续调教需求降至最低。该过程包括将工具移动到光电屏障的中心，以生成工具数据。此系统只需要调教公差范围（允许工具移动的区间）和校准的起点。完成上述操作后，机器人将在定义的公差范围内移动工具，并借助提供的程序自动校准。

### Advantages

- high level of precision
- automated, standardised and reproducible procedure, which is able to eliminate the kinds of human errors (may occur with conventional manual calibration)
- the initial calibration is both rapid & cost-effective

### 优点

- 高精度
- 自动化、标准化以及程序可复制性，这些优点能够消除各种人为错误（可能发生在传统的手动校准中）
- 初始校准既快捷又经济实惠

**Applicable for all robot brands**

### The challenge

Continually securing the correct operating position for fixtures and robotic tools such as welding torches and milling tools.

### The solution

The advintec® TCP tool calibration system calibrates the tool or fixture electronically in up to six dimensions. **Calibrates grippers, fixtures and locates parts in robotic applications inline**

在机器人应用中在线校准抓手、夹具和定位零件

It can also be used as crash recovery system in order to re-calibrate tools and fixtures after collisions.

During gripper measurement it ensures the precise calibration of grippers or gripped parts for precision handling, e. g. for power-train applications, such as engine and transmission parts. Precisions laser sensors secure that changes in the gripper or in the part location are detected at an early stage and are corrected inline.

**Due to the modular set-up the calibration system can be adapted to the corresponding application.**

It consists of

- **advintec controller**
- **sensor interface**
- **sensors** (laser point, laser line or infared sensor ...)
- **cable set**

As a standard we use laser triangulation sensors.

The system is expandable, i.e. multi sensor capable.

## Advantages

- High precision 6D laser measurement without technical aids oder reference parts
- Corrections of processing position take place directly and automatically within ongoing production process
- Eliminates manual program corrections
- Scalability and standardisation
- Simple to integrate and use
- Simple commissioning via supplied robot program
- High tolerance to ambient light
- Measurement time starting from 3 sec. (depending on configuration and application)
- Increase of plant availability and quality assurance of products
- Cost savings compared to conventional mechanical systems

此传感器也可以用作故障恢复系统，以便在系统故障后重新校准工具和夹具。

在抓手测量期间，它确保了抓手或被夹取部件的精确校准，以实现精确处理，例如，用于发动机和传动部件等动力总成应用。精密激光传感器可确保在早期阶段检测到抓手或零件位置的变化并进行在线校正。

**由于模块化设置，校准系统可以适应相应应用。**

该系统包括：

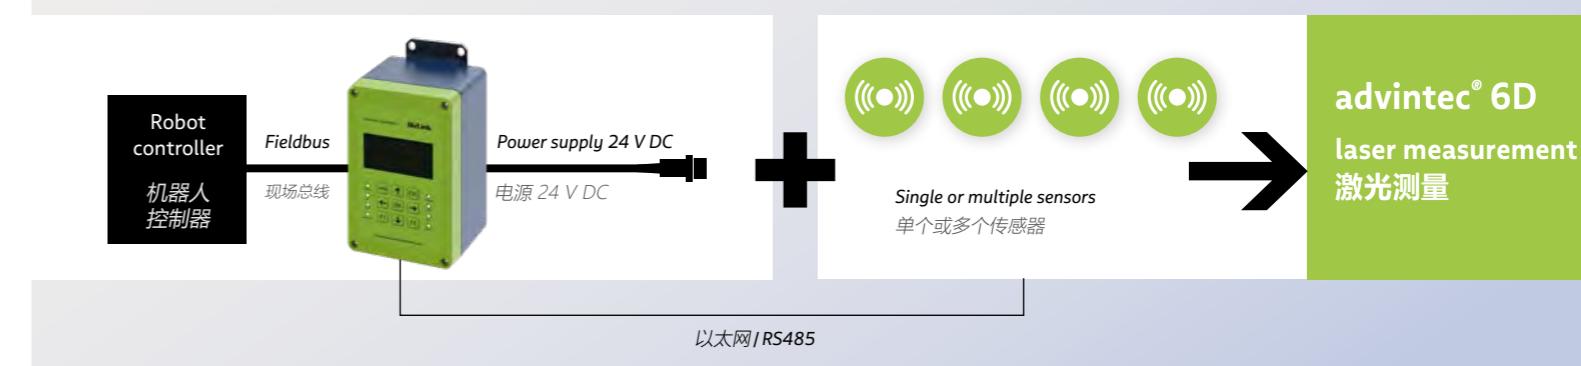

- **advintec 控制器**
- **传感器接口**
- **传感器** (激光点、激光线或红外传感器.....)
- **电缆组件**

标准情况下，我们使用激光三角测量传感器。该系统是可扩展的，即支持多传感器。

## 优点

- 高精度 6D 激光测量，无需技术辅助或参考零件
- 在正在进行的生产过程中直接对加工位置进行自动校正
- 消除手动程序修正需要
- 可扩展性和标准化
- 易于集成和使用
- 通过提供的机器人程序进行简单调试
- 对环境光线耐受性高
- 测量时间从 3 秒开始 (取决于配置和应用)
- 提高工厂适用性和产品质量保证
- 相较于传统机械系统节省成本

## The challenge

In modern production plants it is often necessary to extract parts (body side panels, roofs, hoods and similar parts) that are then delivered in bins for further processing in a fully automated fashion. To this end, industrial robots are mostly used. If the part is not exactly located where expected, the robot cannot continue its operating cycle.

## 挑战

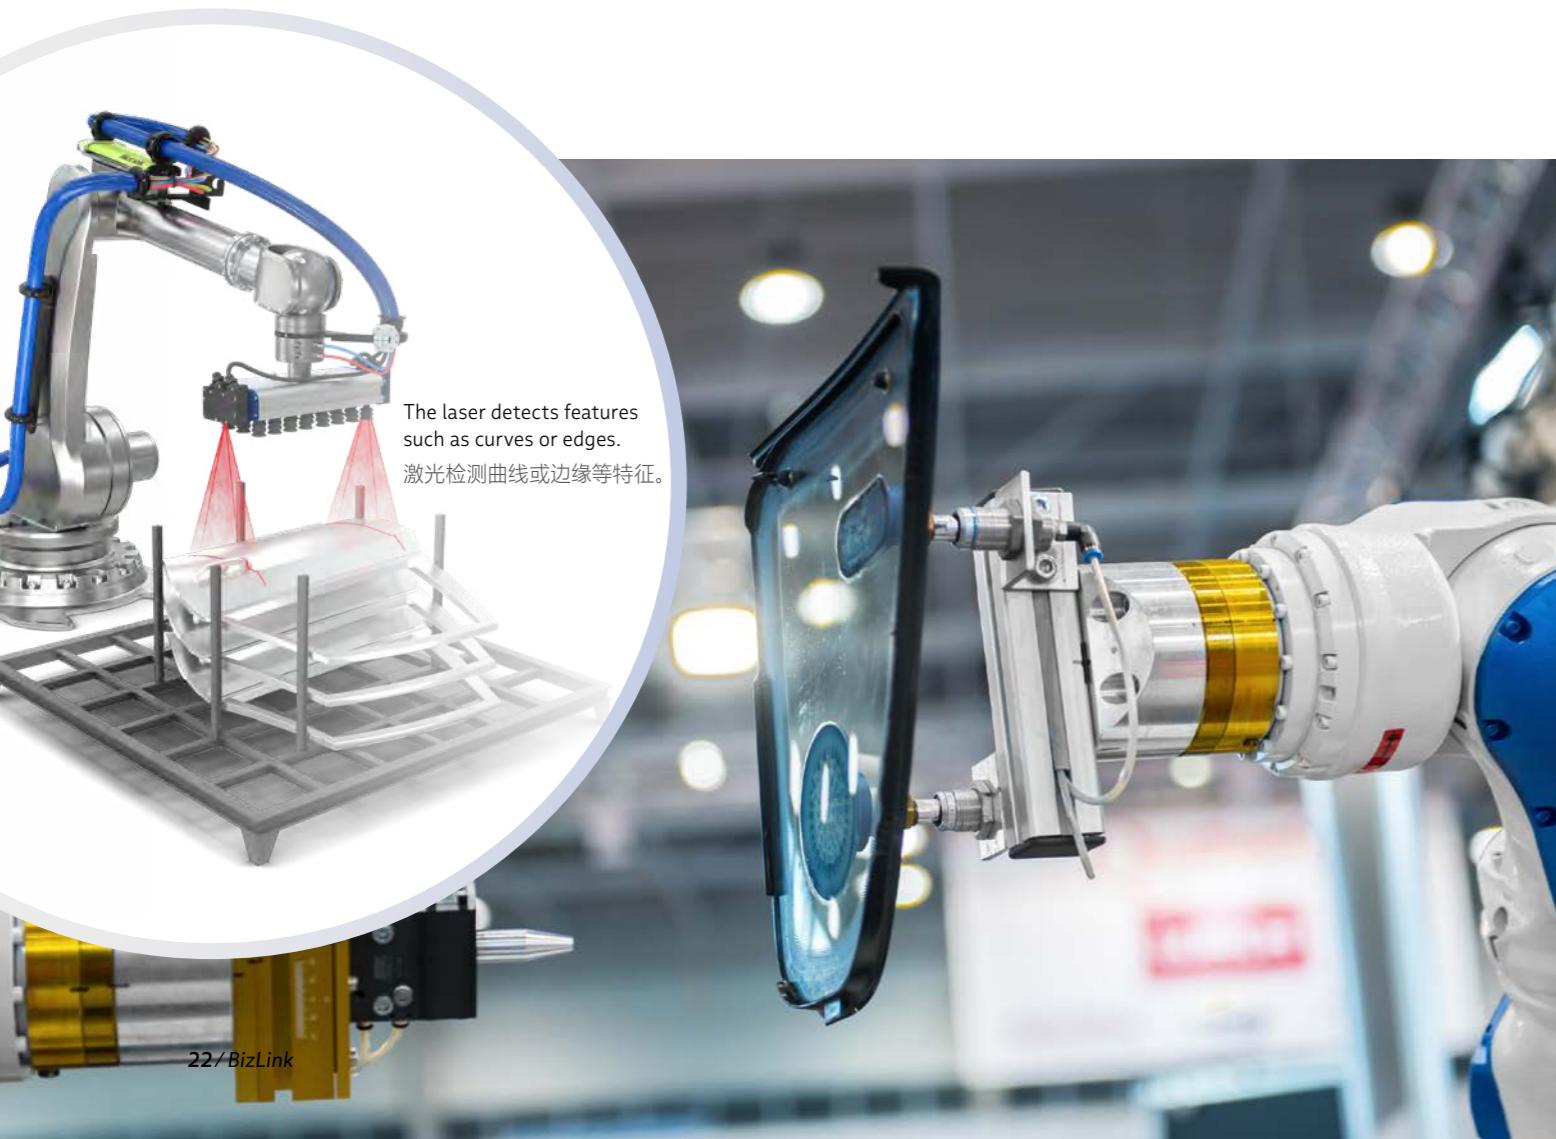

在现代化生产工厂中，通常需要拆取零件（车身侧板、车顶、引擎盖和类似零件），然后将其放入箱中以全自动方式进行下一步加工处理。为此，工厂多采用工业机器人来完成。如果零件未准确定位在预期位置，机器人将无法继续其操作循环。

## The solution

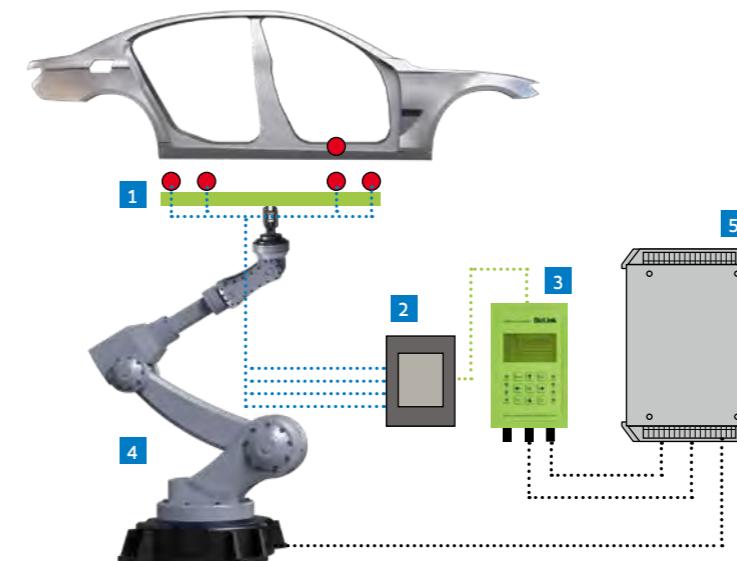

- guidance of the robot via an electronic part calibration system
- 6D calibration of the part position (translation and rotation) by means of laser or infrared sensors integrated within the gripper – direct connection with robot controller via field bus

# Services

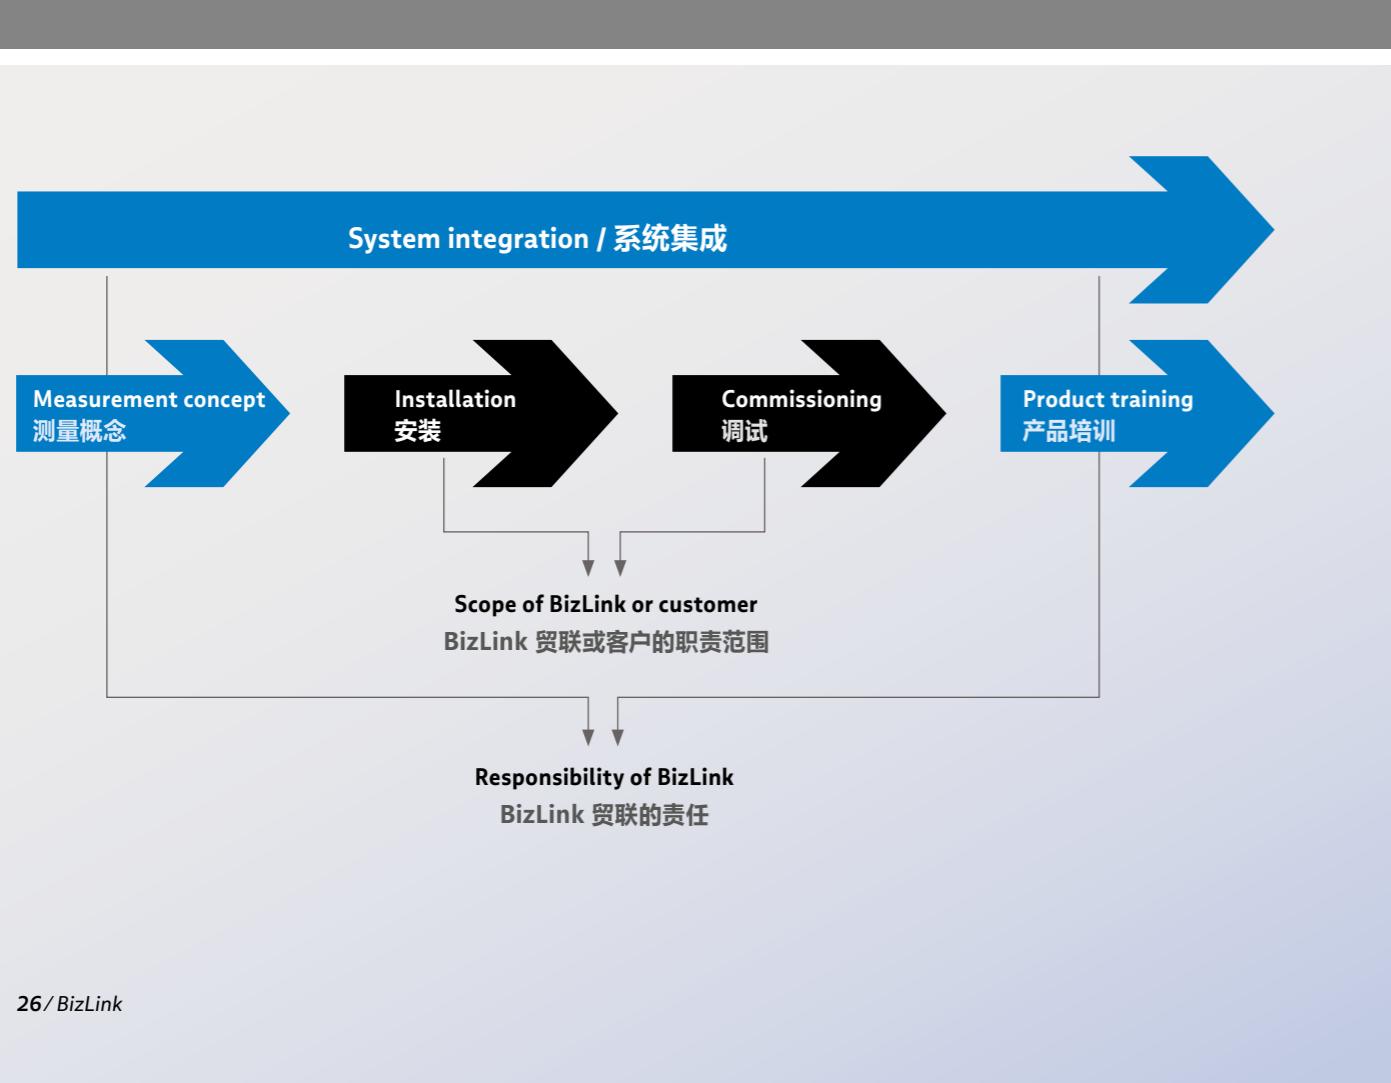

## 服务

**We analyse the process conditions and work with the customer to develop an application-specific solution model to ensure optimum measurement, in the form of a feasibility study.**

Depending on the level of complexity – or at the customer's request – an on-site test installation then follows, whose results we discuss with the customer. Findings from the test installation are analysed by our experienced team and accounted for appropriately in the final measurement concept.

### Measurement concept / 测量概念

我们以可行性研究的形式分析工艺条件并与客户合作开发特定应用的解决方案模型, 以确保最佳测量。

根据复杂程度——或根据客户的要求——随后进行现场测试安装, 我们与客户讨论其结果。我们经验丰富的团队对测试安装的结果进行分析, 并在最终的测量概念中做出适当的解释。

### Installation

To ensure that the final system runs as smoothly as possible, it is especially important that customers can rely on professional installation services. We install our sensor technology as required, either on stationary systems or robotic tools or grippers, and we also handle all of the cabling work. If special attachment components are needed, then we manufacture these for our customers.

### Commissioning

During standard commissioning, our team of specialists performs commissioning of measurement functionality based on the documentation. This includes verifying settings while also ensuring the optimum level of system functionality. If required, we can also integrate our measurement system into customer PLCs (i.e. plant logic). The controller is integrated into the respective fieldbus and our software package is interfaced with the customer's robot code – i.e. our software is modified to suit customer-side programming standards.

### Product training

Our product training sessions are conducted by experienced Service Technicians with extensive expertise in production processes. We also offer customer-specific training tailored to plant operators, maintenance staff and commissioning personnel.

### System integration

We offer our customers a complete package of services for system integration: from the preparation of the measurement model and installation to commissioning and subsequent product training, we are responsible for every step of system integration.

### 安装

为确保最终系统尽可能顺利运行, 客户可以使用专业的安装服务尤为重要。我们根据需要在固定系统或自动化工具或抓手上安装传感器技术, 并处理所有布线工作。如果需要特殊的零件, 那么我们负责为客户制造。

### 调试

在标准调试期间, 我们的专家团队会根据文档对测量功能进行调试。这包括验证设置, 同时确保系统功能处于最佳水平。如果需要, 我们还可以将测量系统集成到客户PLC (即工厂逻辑) 中。控制器集成到相应的现场总线上, 与此同时, 软件包与客户的机器人代码接口——即我们的软件经过修改以适应客户编程标准。

### 产品培训

我们的产品培训课程由经验丰富的服务技术人员进行, 他们在生产过程方面拥有丰富的专业知识。我们还提供针对工厂操作员、维护人员和调试人员的客户特定培训。

### 系统集成

我们为客户提供一整套系统集成服务: 从准备测量模型和安装到调试以及后续的产品培训, 系统集成的每一步我们都负责到底。
