

BizLink
Hoses & Tubes

Designed for Safety.
Built for Reliability.
Proven in Motion.

BizLink hoses deliver safe, reliable, and long-lasting performance in automation, robotics, welding, and packaging applications. Each hose line is engineered to ensure stable media flow and consistent operation under continuous motion, supporting extended service life in demanding industrial environments.

PROVEN PERFORMANCE 〉

Each BizLink hose batch undergoes durability, flexibility, and thermal-resistance testing to ensure consistent quality and reliable performance under dynamic applications.

OUR PRODUCT LINES 〉

BizLink tube-fit **PUR-line**	BizLink tube-fit **FR-line**	BizLink tube **Profile-line**
• For flexible pneumatic and fluid transfer in automation and robotics • High abrasion and chemical resistance • Flexible even in tight bending radii • Durable performance under continuous motion	• For welding, paint, and high-temperature production areas • UL94 V-0 flame-retardant material • Anti-spatter, heat-resistant construction • Stable flexibility under elevated temperatures and dynamic movement	• For compact automation and dynamic movement on feeding application • Profiled wall prevents kinking and crushing for smooth feeding • Smooth bore ensures stable flow and pressure • Highly flexible for tight or dynamic installations
Applications 〉 Robotics, automation lines, packaging systems	**Applications 〉** Welding cells, paint shops, surface treatment systems	**Applications 〉** Robotics, feeding systems, compact automation
Key benefit 〉 Reliable operation under continuous motion that minimizes maintenance and maximizes uptime.	**Key benefit 〉** Maximum safety and stable operation in heat-exposed and dynamic environments.	**Key benefit 〉** Continuous, kink-free media flow ensuring stable performance in dynamic feeding applications.

Why Choose BizLink Hoses & Tubes

Long service life 〉 Abrasion- and chemical-resistant materials reduce wear under motion, lowering replacements and maintenance.

Reliable performance in motion 〉 Stable media flow and flexibility ensure consistent production.

Safety where it matters 〉 Flame-retardant, anti-spatter options ensure safe and stable performance in welding and paint environments.

Easy integration 〉 Compatible with standard fittings and proven in robotic dresspacks.

Trusted performance across industries 〉 Validated in automotive, robotics, packaging, and other 24/7 environments with continuous operation.
